

(a) ... and attribute means (and thus how the data between them will look in a browser), XML uses the tags only to delimit pieces of data, and leaves the interpretation of the data completely to the application that reads it. Additional information about XML can be found on the web site. About importing XML data **Access**

(b) ... he felt things were getting too quiet, and small explosions from Fred and George's bedroom were considered perfectly normal. What Harry found most unusual about life at Ron's, however, wasn't the talking mirror or the clanking ghoul: it was the fact that everybody there seemed to like him. Mrs **Weasley**

(c) ... is a great difference between Napoleon the Emperor and Napoleon the private person. There are raisons d'etat and there are private crimes. And the talk goes on. What is still being perpetuated in all civilized discussion is the ritual of civilized discussion itself. Tatu agrees with the Archbishop about the **Russians**

Figure 8: NLL losses (y axis) for 3 selected target tokens as a function of context length (x axis). Below each plot, the target token is displayed in bold, along with a context of 60 tokens. The x axis is reversed to correspond visually to left-hand context. The red dots show the 10 tokens that cause the largest drops in GPT-J cross entropy when added to the context.

Figure 9: KL divergences (y axis) from Eq. (5) for 3 selected target tokens as a function of context length (x axis). Below each plot, the target token is displayed in bold, along with a context of 60 tokens. The x axis is reversed to correspond visually to left-hand context. The red dots show the 10 tokens that cause the largest drops in the metric (for GPT-J) when added to the context.
